

FIG. 5 (color online). Spline fits to the trace anomaly for several values of the lattice spacing $aT = 1/N_\tau$ and the result of our continuum extrapolation (left). Note that the error bands shown here do not include the 2% scale error. The right-hand panel shows suitably normalized pressure, energy density, and entropy density as a function of the temperature. In this case the 2% scale error is included in the error bands. The dark lines show the prediction of the HRG model. The horizontal line at $95\pi^2/60$ in the right panel corresponds to the ideal gas limit for the energy density and the vertical band marks the crossover region, $T_c = (154 \pm 9)$ MeV.
